

Power BI- Telecom_Dataset

 Telecom_Dataset.xlsx

1. How many total customers are there in the dataset?
2. Which city has the highest number of customers?
3. What is the total recharge revenue?
4. Which plan type (Prepaid / Postpaid) generates more revenue?
5. What is the average recharge amount across all customers?
6. Which customer consumed the highest data (GB)?
7. Which city has the maximum internet data usage?
8. Which month shows the highest total data usage?
9. Which gender consumes more average data?
10. Find top 5 customers by total calls made.
11. Find the total revenue for each plan type (Prepaid/Postpaid).
12. Which recharge plan amount is most popular?
13. Which state generates the maximum revenue?
14. Which customer has done the highest number of recharges?

15. Find month-wise revenue trend. Which month is the best-performing?
16. Find churn-risk customers (those with no recharge in the last 2 months).
17. Identify customers who raised more than 3 complaints.
18. Which age group recharges the most? (18–25, 26–35, 36–50, 50+)
19. What is the average spending per customer per month?
20. Find customers with both high data usage and high complaints.
21. How many complaints were raised in total?
22. What percentage of complaints are resolved?
23. Which issue type has the most complaints? (Network, Billing, SIM Issue)
24. Which city has the highest number of unresolved complaints?
25. Which customers have unresolved complaints older than 7 days?
26. Create a measure for Month-over-Month (MoM) Revenue Growth.

27. Create a Customer Summary Page using slicers and dynamic cards.
28. Highlight top 10 customers using a calculated measure (TopN).
29. Add a KPI visual showing revenue vs target (target = 20 lakh).
30. Create a custom theme and apply it to the dashboard.
